## Preface

The 2009 Agricultural Census is the **Third Agricultural Census** conducted by the Samoa Bureau of Statistics since the first one in 1989. The *“Strategy for the Development of Samoa”*, 2008-2012 highlighted the importance of agriculture as a source of food security, livelihood and social cohesion and it also provides cash income to meet other basic needs.

The Agricultural Sector Plan provides the framework for the development of the sector. However, for sound policy formulation, updated, reliable and timely information is critical. No doubt the information provided in this report will assist policy makers and those involved in the development of the sector to make information based decisions for the betterment of various aspects of the sector and eventually a better standard of living for all Samoans.

The 2009 Census as with the previous censuses was conducted as a joint exercise between the Samoa Bureau of Statistics and the Ministry of Agriculture and Fisheries.

The Census was jointly funded by the Government of Samoa and the Government of Australia through AusAid.

We believe that the mass of information contained in this report will be of great value to Planners, Administrators, and Policy Makers in formulating development plans for the betterment of the people of Samoa.

The Census has also provided a large number of people with training in data collection techniques, data processing and also the use of Statistical data.

In conclusion I would like to extend our gratitude to the people of Samoa for their willing co-operation in providing answers to all the questions put to them, to the enumerators and supervisors in collecting the data and to the management staff of the Samoa Bureau of Statistics and the Ministry of Agriculture and Fisheries in shouldering the heavy responsibility of conducting the Census.

We are also grateful to the Secretariat of the Pacific Community (SPC) for providing technical support particularly through the services of Ms Leilua Taulealo, Computer Expert in Data Processing.

## **1 Introduction**

The 2009 Agricultural Census is the third Agricultural Census undertaken by the Samoa Bureau of Statistics in collaboration with the Ministry of Agriculture and Fisheries. The Census collected a large volume of information pertaining to the agricultural activities of households. Enumeration was carried out for 5 weeks in November/December 2009 by enumerators selected from the villages through interview and a basic test. The test included basic mathematical skills, knowledge of agricultural practices and map reading. This was to ensure that the enumerators are of high quality.

The officers of the Samoa Bureau of Statistics and the Ministry of Agriculture and Fisheries were allocated to specified areas as supervisors.

This Tabulation Report provides the users the opportunity to access the census information while an analytical report under preparation.

## **2 Census Methodology**

The methodology for carrying out the Census of Agriculture in Samoa was a combination of complete count and sample survey. Thus the census was basically a two part operation. The first part involved all households. For Households classified as “Non Agricultural” they were not required to complete a ‘Holding Form. For all agricultural households, a Household and Holding Form were to be completed.

The second part of the enumeration was designed to cover 25 percent of all agricultural holdings as identified in the first part, with selection made on systematic sample basis (every fourth holding selected). Thus while the Household Form was canvassed in respect of all households in the country, the holding form for the agricultural households only, the parcel form was completed in respect of 25 percent of the agricultural holdings only.

## **3 Authority for the Agriculture Census**

Authority for the Census rested with the Government Statistician, who had the legal power to collect such information under Statistics Act 1971. The act provides for total confidentiality of the information collected in the census. The information can only be used for the purpose of compiling statistics and no individual information can be disclosed to anyone outside the census organization.

## **4 Scope of Agriculture Census**

The following table gives the scope of Censuses of Agriculture 1999 and 2009. In the 2009 Census, the scope has been expanded to cover additional crops for household consumption.

The table below gives the details of the scope of the 1999 and 2009 censuses.

ITEMS No.	DATA ITEMS	1999	2009
<b>HOUSEHOLD FORM</b>			
1	Level of Agriculture Activity of the Households	√	√
2	Number of Holdings and Method of Operation*	√	√
3	Total Area of the Holding*	√	√
4	Crops Grown*	32 crops	38 crops
5	Sale of Major Crops	8 major crops	Not collected
6	Consumption of Major Crops	8 major crops	19 major crops
7	Livestock (additional data on number of pet animals)	3 data items	4 data items
8	Amenities at the Principal Homestead	√	√
9	Household Composition	√	√
10	Labour Inputs*	√	√
11	Household Income and Credit*	√	√

## **5 Data Collection and Processing**

Data collection focuses on the private households only. Institutional households such as hotels and boarding schools were not included. This with other factors accounts for the low household and population count. Furthermore, data collected to estimate single crop equivalent area were collected on a 25% sample of agricultural active households. Because only a sample on the agriculturally households were included, this introduces sampling errors.

Data Processing was done by Ms Leilua Taulealo of the Secretariat of the Pacific Community using CsPro, the same software used in the previous census. Manual edits were firstly done by the supervisors in the field and later in the main office by a team of 8 staff for 3 months. Although all the forms were completed with a high standard in terms of completeness and consistency, the parcel needed special attention particularly in terms of plot area.

For example, the respondent was required to provide the area or the number of plants if the plot is planted as a single crop. However, in some cases, both were provided. In this case, the number of plants takes priority. In the case of mixed crops, the proportion of mix was to be given for up to 4 crops. However, if the proportion of mix is not given, then each crop of the mixed was assumed to be in equal proportion.

## **6 Definition**

### **6.01 Household**

One or more persons who live together and have their meals together.

Note that:

- ❖ Just one person, living by himself/herself and looking after himself/herself is considered a household.
- ❖ Usually a household occupies one building but in a few cases two or even more households may share one building. For example, four households living in an apartment building containing four apartments.
- ❖ Alternatively, one household can occupy more than one building, for example, one household using a living fale, sleeping fale, kitchen fale and three small fales.
- ❖ An Aiga is normally composed of several households.

### **6.02 Head of Household**

The person who is considered to be the head by the members of a household that is, all persons living in the household.

### **6.03 Level of Agricultural Activity**

Non-Agricultural – This means that the household does not engage in any crop production. Such households may own or look after land NOT IN USE and also own or look after livestock.

#### **6.04 Minor Agricultural Activity**

The household has only very few crops defined as less than 625 sq. yards (25 x 25 yds.) of land under garden crops or less than 20 coconut trees or less than 20 Banana plants or less than 20 other tree crops.

#### **6.05 Subsistence Only**

The household produces crops but does not sell.

#### **6.06 Subsistence and Cash Cropping**

The households main purpose of agricultural productions is to feed itself (subsistence) but some crops or surplus crops are sold.

#### **6.07 Commercial**

The households in this category differ from those in category 4 by the fact that their main purpose of production is to sell their produce either locally or for export.

#### **6.08 Holding**

An agricultural holding is an economic unit of agricultural production under single management comprising of all livestock kept and all land used wholly or partly for agricultural production purposes, without regard to title, legal form or size. Single management may be exercised by an individual or household, jointly by two or more individuals or households by a clan, or tribe or by a juridical person such as corporation, cooperative or government agency.

The holding land may consist of one or more parcels, located in one or more separate areas or in one or more enumeration areas, provided the parcels share the same production means utilized by the holding such as labor, farm buildings or machinery.

#### **6.09 Individual Household on Own Account**

This refers to the holding operated by member(s) of a single household.

#### **6.10 In Partnership**

The holding is operated in association with one or more partners who may be related or not related but who live in different households and thus have different principal homesteads.

#### **6.11 Village Association**

The holding is operated by an association or committee, an example of this is the Women's Committee that could either be crop or livestock or poultry production or any combination of them.

#### **6.12 Institution**

The holding is operated by a religious institution or organization through a hired manager. An institution is an organization providing a specific service or performing some general public function for a group of individuals such a prison, hospital, hotel, church boarding school etc.

### **6.13 Operator**

An operator of agricultural holding is the person or persons who exercise management control over the operation of the agricultural holding. Where a single household is operating the holding, the head of the household in most cases is the operator. A holding can have more than one operator especially in cases where one member of the household exercise management control on one aspect of the holding (e.g. crops) and the other manages the other part of the holding (e.g. Livestock) or the holding is being operated as partnership or some other form of joint operation. In some cases the operator is not necessarily the head of the household, or the owner of the place or the matai of an aiga, he/she may be a member of the owner's household, a hired manager, a tenant or a renter, a person who operates customary land as assigned to him/her by his matai or a person who operates the land under government permit.

### **6.14 Crops Not Grown in 2009**

The crops were grown before the year 2009 but still producing or yielding agricultural produce as of the time of visit.

### **6.15 Crops Currently Growing in 2009**

The crops are on the field at the time of visit

### **6.16 Not Growing but Grown in 2009**

The crops were planted anytime within the year 2009 but have already harvested. This category of crops particularly refers to short term crops.

### **6.17 Parcel**

A holding parcel is any piece of land entirely surrounded by other land, water, road, forest etc., not forming part of this holding. A parcel may consist of one or more fields adjacent to each other. In other words a parcel is a contiguous piece of land in a holding. The entire land of the holding may consists of one or more than one parcel.

### **6.18 Land Tenure**

Land Tenure refers to arrangements or rights under which the holder holds or uses holding land.

### **6.19 Land Use**

This provides a classification of the holding according to the activity, which is directly related to the land, makes use of its resources or has an impact upon it.

### **6.20 Land under tree crops**

These are trees bearing edible fruits or nuts. The trees themselves should usually have an economic life of more than five years. Example includes mango, banana, coconut cocoa, citrus, breadfruit etc.

**6.21 Land under other crops**

The other crop include field crops like taro, taamu, cassava, yam, sugarcane and vegetable crops like eggplant, beans, cabbage, tomato etc.

**6.22 Land under tree crops and other crops**

If the land is both under tree crops and other crops, it should be classified as land under tree crops and other crops.

**6.23 Land under fallow**

Fallow land is land that was used for growing crops sometime in the past but currently not used for growing crops.

**6.24 Land under virgin bush**

Land which was never cultivated but is covered with bush is to be classified as land under virgin bush.

**6.25 Land under non-agricultural uses**

This is the land that is under buildings, roads and other non-agricultural uses.

**6.26 Land under livestock and poultry**

This land is used for raising or tending livestock like cattle, goats, pigs, etc. and poultry like chickens, etc.

**6.27 Period of Use**

This refers to the number of years that each reported parcels was used.

**6.28 Plot**

A plot is a part or whole of a parcel on which a specific crop or crop mixture is cultivated. A plot can also be a fallow land or land ready for planting or bush plot or plot under other use like homestead.

**6.29 Land Area**

Land area is the physical measure of the land in acres. There are 4,840 square yards in an acre. As a rough guide the following proportions of an acre are represented by squares whose sides have the following lengths.

Area in Acres	Length of sides of square in yards
1	70
$\frac{3}{4}$	60
$\frac{1}{2}$	50
$\frac{1}{4}$	35
$\frac{1}{8}$	25

### **6.30 Single Cropped**

A “single cropped” pattern refers to one crop’ which has been planted in a regular pattern such as rows. If there are a few other trees/plants of different crops in scattered plantings over the plot, consider the plot to be ‘single cropped’ to the crop that is planted in a regular pattern.

### **6.31 Mixed Crop**

A “mixed crop” pattern refers to two or more crops which are interplant in a regular pattern such as rows. Again if there are a few scattered plantings of other crops do not consider them to be crops that are interplant in a “mixed cropped” combination

### **6.32 Scattered Crop Pattern**

A scattered pattern refers to crops/plants which have not been planted in any regular patterns such as rows or some uniform method of spacing. Scattered crops/plants can be found among plants of a regularly (pattern) planted plot.

### **6.33 Inorganic fertilizers**

These are manufactured mineral substances applied to soil, or irrigation water, to supply plants with the necessary nutrients.

### **6.34 Organic Fertilizers**

These are materials of organic origin, either natural or processed, that can be used as sources of plant nutrients. The most commonly used are dried leaves, chicken manure or other animal manure, etc.

### **6.35 Agricultural chemicals**

These are used for controlling or eliminating pests that destroy crops or livestock. These include insecticides, fungicides, and herbicides.

### **6.36 Inshore Fishing**

Fishing activity done from the shoreline to the reef

### **6.37 Offshore Fishing**

This is a deep sea fishing activity done beyond the reef.

### **6.37 Reference Period**

Unless otherwise stated in the Tables, the reference period for data collection was the period 1 January 2009 to the day of enumeration (November/December 2009)
