Census Population characteristics

Population and Housing Census Implementation

The Census of Population and Housing is the most important source of statistical information for planning and policy making purposes. It provides a complete coverage of the total population and it entails a great deal of information relating to social, economic and demographic characteristics of the population. Before the Census enumeration the household listing and mapping activity was conducted from August-October, 2020 to update the total count of households and their location for ease of the census enumeration by the enumerators

[1] All PHC indicators are or can be disaggregated, where relevant, by sex, age, disability and geographic location (as per the reporting domains), or other characteristics,

[2] Sustainable Development Goal (SDG) Indicators, <http://unstats.un.org/sdgs/indicators/indicators-list/>. The Inter-agency Working Group on SDG Indicators is continuously updating the metadata of many SDG indicators and changes are being made to the list of SDG indicators. MICS covers many SDG indicators with an exact match of their definitions, while some indicators are only partially covered by MICS. The latter cases are included here as long as the current international methodology allows for only the way that the MICS indicator is defined, and/or a significant part of the SDG indicator can be generated by the MICS indicator. For more information on the metadata of the SDG indicators, see <http://unstats.un.org/sdgs/metadata/>.
